175, Ramapuram, Karunagaracheri, Thiruninravur, Chennai -602024.

B.E (Mechanical)

CAREER TIMELINE:

2005 SSLC

2007 HSC

2010 Diploma in Mechanical Engineering (TOOL & DIE)
MURUGAPPA POLYTECHNIC COLLEGE

6 months gap wait for results and joining formalities

2011 **Renault Nissan Technology & business center**
Trainee- CAE- CFD - model building And Automation (C++/Python)

2013 **Renault Nissan Technology & business center**
Project Lead- CAE – Automation (Python) shift-2

BE (Mechanical Engineering)
Anna University- MIT campus

2017 **Sathyam venture** - **Ford Technologies**
Automation Lead - Automation and Application development (Python, VBA, Java script)

2018 **Xitadel Technologies - BETA CAE Systems**
Senior CAE analyst- Process Automation & Technical support (Python)

2022 **Cholamandalam Finance Services**
Senior manager - Web development and API services (Python, Fast API, AWS, Java script, RDBMS)

2025 **Infosys – BOFA**
Senior backend developer – ARIE (flask)

Present

* No major Gaps for education and career
* Started career after Diploma completion and completed Full time Graduation in parallel

Python Developer

Relevant Experience: 14 years

CAREER OBJECTIVE

Experienced Python Developer with 14+ years in backend, automation, and full-stack development. Skilled in delivering secure, scalable applications across finance, banking, and automotive domains. Adept at leading teams, optimizing systems, and driving innovation.

Industry
- Automobiles, Finance, **Banking**

Functional
- **Back-End Development** (Flask, FastAPI, Python)
- Front-End Development (JavaScript, Flask, HTML5, CSS)
- API & UI Design
- Architecture & Design
- Testing & Quality Assurance (Pytest, Sonar Qube)
- Database Management (MySQL, SQL Server, SQL Admin)
- DevOps & Deployment (CI/CD, Docker, Kubernetes, Nginx, OCI, AWS)
- UAT Demos & Production Release Preparation

Tools
- Jira, Git, VS code, Sonar, Jenkins, Docker, Kubernetes, Grafana, AWS

- **Back-End Expertise |** Implemented **FastAPI** and **Flask** to build robust RESTful APIs, enabling efficient backend logic and seamless data exchange.
- **Front-End Expertise |** Designed and implemented modern, responsive user interfaces using **HTML5, CSS, JavaScript**, and FastAPI framework. Built desktop applications with **VTK** and **PyQt** for 3D rendering and simulation.
- **Database Design & Integration |** Designed and optimized MySQL databases; implemented complex queries, data modeling, procedures, secure data handling and analytics support and indexing strategies for high performance.
- **Security & Compliance** | Applied authentication (**AES**), data encryption, and secure coding practices in compliance-heavy domains. Led vulnerability assessments and secure code reviews.
- **Leadership & Collaboration** | Led Agile teams, sprint planning, code reviews, and daily standups. Acted as a bridge between technical and non-technical stakeholders, translating complex concepts into actionable insights. Conducted sprint and UAT demos for business users.
- **End-to-End Project Delivery** | Successfully delivered multiple full-stack web and desktop applications from planning and design to deployment and maintenance, ensuring scalability, performance, and user-centric design.

KEY PROJECTS HIGHLIGHTS

Project: Repository Artifact Engine- Infosys *(08-May-2025- Present)*

Client: Bank of America

Business Requirement: Developed a backend application to enable teams to upload evidence files, with keyword-based search and download functionality. The solution integrates Elastic Search, SharePoint, bucket storage, and an AI model (in progress).

Responsibilities:

- Enhanced and implemented new functionalities to meet evolving business needs
- Maintained and debugged code to resolve issues and ensure stability
- Created and maintained test cases to guarantee proper coverage
- Rebuilt functionalities to address existing vulnerabilities
- Participated in sprint planning, documentation, and agile ceremonies
- Managed data storage and decommissioning of outdated components

Tech Stack: **Flask,** Python, SQL Server, Postman, PyCharm, Git, Jenkins, SonarQube, SonarLint, Jira, Copilot

---

Project: Partner portal- Api services- Cholamandalam *(27-jun-2022 to 30-Apr-2025)*

Business Requirement: Developed a loan journey application to streamline customer onboarding and loan processing through secure, scalable APIs and integrated frontend interfaces.

Responsibilities:

- Technical lead of the entire team and guide them to meet the project goals and objectives
- Support and coach peers and juniors as and when required on specific technical competencies required to deliver on the assigned tasks
- Review and integrate all application requirements, including functional, security, integration, performance, quality, and operations requirements
- Collaborated with entire team including PO, Architects, developers, testers and client teams for backlog grooming, sprint planning & deliverables and sign-offs.
- Test case / code PR review
- Designed and integrated Rest API's following best practices, ensuring high scalability and security.
- Developed backend APIs, frontend interfaces, and data management

Tech Stack: **Fast API,** Python, Postman, Vs code, Copilot, Git, Jenkins, SonarQube, Sonar Lint, Jira.

Project: Product simulation- Sathyam Venture *(02-Jul-2018 to 20-jun-2022)*

Client: Ford

The tool development for the combined application of 3D simulation, visualization and process integration

Responsibilities:

- Managed the entire automation support for the team, focusing primarily on automation for pre-processing, simulation, and post-processing in CAE applications using Python.
- Contributed to the development of process automation using PyQt5 and report automation using VBA and JavaScript (server less applications).
- Acted as a Python trainer for the team.

Tech Stack: **PyQt, VTK,** python, HTML, CSS, Javascrpt, MySQL, pyinstaller.

KEY PROJECTS HIGHLIGHTS

Project: Automation- BETA CAE SYSTEMS *(24-Oct-2016 to 29-Jun-2018)*

ANSA Automation and plugin development

Responsibilities:

Beta CAE Systems is a CAE software provider for the automobile industry. My contributions to the organization include collecting application issues and providing solutions for clients. I was also involved in the development of solutions for the reported issues and worked on plug-in development for the application based on the needs of various industries. I utilized Python for all plug-in developments and provided training in **ANSA**, **META**, and **Python** to CAE engineers.

Tech Stack: **FEA,** python, Meta, Automation.

Personal Projects

Web Applications Portfolio

DevOps Dashboard | FitMafia Gym App | Gifting App

- Designed and deployed multiple full-stack web applications showcasing frontend and backend integration
- Built responsive user interfaces with JavaScript and CSS
- Configured Nginx reverse proxy, port forwarding, and SSL certificate handling for secure routing
- Deployed on Oracle Cloud Infrastructure (OCI) with automated CI/CD pipelines
- Applied SonarQube for code quality and vulnerability checks
- Managed repositories and workflows via GitHub and Github Actions

Tech Stack: Flask, Python, JavaScript, CSS, Nginx, **OCI**, Git, Github Actions, SonarQube

Code Repository: github.com/viswavisan

DECLARATION

I Viswanathan. L, the above furnished statements are correct and true to the best of my knowledge.

Date:
Place: Chennai.
